

1. Ritu purchased 20 dozen of bananas at the rate of ₹ 375 per dozen. She sold each one of them at the rate of ₹ 33. What was her profit percentage? **(Profit and loss) NIMCET-2023**
 (a) 12.3% (b) 5.6%
 (c) 6.5% (d) 10%
2. After allowing 20% cash discount, a trader still earns a profit of 11.11%. How much above the cost price, the trader marks his goods? **(Profit and Loss) NIMCET-2024**
 (a) 38.88% (b) 40%
 (c) 30.33% (d) 28%

Solution:

1. **(b)** CP of 20 dozen bananas = 375×20
 = Rs. 7500

$$\text{SP of 20 dozen bananas} = 33 \times 12 \times 20 \\ = \text{Rs. 7920}$$

$$\text{So Profit} = 7920 - 7500 \\ = \text{Rs. 420}$$

$$\text{So Profit \%} = \frac{\text{Profit}}{\text{CP}} \times 100 \\ = \frac{420 \times 100}{7500} = 5.6\%$$

2. **(a)**
 100 → MP
 ↓ -20%
 80 → S.P.
 100 → C.P.
 111.11% 80
 $1\% = \frac{80}{111.11} \times 100$
 → ~72
 $\frac{28}{72} \times 100 = 38.88\%$
